

Science, Technology, and Innovation Plan is a strategic, short-to-medium-term framework to guide and coordinate investments, policies, and actions aimed at harnessing science, technology, and innovation for sustainable and inclusive socioeconomic development. It serves as a blueprint that aligns with and contextualizes the national STI agenda and strategies while addressing the unique geographic, economic, social, and cultural characteristics, competitive advantages, and development challenges of the locality. On April 23, 2026, through technical assistance from the Department of Science and Technology–Camiguin, the Local Government Unit of Guinsiliban conducted a workshop to formulate its own STI Plan. The plan positions Guinsiliban to become a forward-looking and innovation-driven municipality.
